**SEMESTER: I**  
**COURSE CODE: 23UMA1A13**  
**ALLIED – NUMERICAL METHODS**  
*(Employability)*

**(For B.Sc., Computer Science, B.Sc., Information Technology and BCA candidates admitted from the academic year 2023 onwards.)**

**COURSE OBJECTIVES:**

- To introduce numerical methods for solving algebraic and simultaneous equations.
- To learn the techniques of numerical differentiation, integration
- To enable the students to solve the ordinary differential equations using Numerical Methods.

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO1</b>	Identify the methods to solve the given equations.	<b>K2</b>
<b>CO2</b>	Finding the solution for the system of equations by Gaussian Methods	<b>K3</b>
<b>CO3</b>	Estimate the Missing values in the given data.	<b>K3</b>
<b>CO4</b>	Integrate the given function.	<b>K3</b>
<b>CO5</b>	Find solution to the Ordinary Differential Equations	<b>K3</b>

**SYLLABUS**

**Credits : 4**

**Instructional Hours: 75**

**Unit I: Solution of Numerical, Algebraic and transcendental equations (K2)      15 Hours**

Introduction to Numerical Analysis: Solution of Numerical Algebraic and Transcendental Equations - Bisection Method- Iteration Method - Regula-Falsi Method - Newton Raphson Method.

**Unit II: Solution of Simultaneous Linear Algebraic Equations (K3)      15 Hours**

Direct Method- Gauss Elimination Method- Gauss Jordan Method- Iterative Method- Gauss Jacobi and Gauss Seidel Method.

*(Self Study- Problems in Gauss Seidel method)*

**Unit III: Interpolation (K3)      15 Hours**

Gregory Newton's Forward and Backward Interpolation Formulae -Lagrange's Interpolation Formula - Inverse Interpolation Formula.

*(Self Study- Problems in Gregory Newton's Backward Interpolation Formulae)*

**Unit IV: Numerical integration (K3)      15 Hours**

Trapezoidal Rule-Simpson's Rule - Simpson's one-third Rule.

**Unit V : Numerical Solution of Ordinary Differential Equations (K3)      15 Hours**

Euler's Method- Modified Euler's Method- Runge-Kutta Method (Second order and Fourth order) (Problems only)

**TEXT BOOK:**

Kandasamy P, Thilagavathy K, Gunavathi K, (2016) Numerical Method (3<sup>rd</sup> Revised Edition)  
S.Chand & Company Ltd, New Delhi

UNIT I	Chapter 3	Section 3.1 to 3.4
UNIT II	Chapter 4	Section 4.1, 4.2, 4.7, 4.8, 4.9
UNIT III	Chapter 6	Section 6.1, 6.2, 6.3
	Chapter 8	Section 8.7, 8.9
UNIT IV	Chapter 9	Section 9.7, 9.9, 9.13, 9.14
UNIT V	Chapter 11	Section 11.1, 11.9, 11.11, 11.12, 11.13

**REFERENCE BOOKS:**

1. Venkataraman. M. K., (1999) Numerical Methods in Science and Engineering, The National Publishing Company, Madras.
2. Sastry S.S, Introduction to Numerical Analysis, Prentice Hall of India Private Limited.

(Correlation: 3 – High; 2 – Medium; 1 - Low)

**ASSESSMENT TOOLS:**

<b>S.No</b>	<b>Assessment methods</b>	<b>Frequency of Assessment</b>
1.	End Semester Examination	Once in a semester
2.	CIA I	Once in a semester
3.	CIA II	Once in a semester
4.	Model Examination	Once in a semester
5.	Assignment (Unit I & II)	Twice in a semester
6.	Seminar (Unit III & IV)	Twice in a semester
7.	Real time problem solving (Unit V)	Once in a semester

<b>Course designed by</b> Dr. G. Sindhu	<b>Verified by HOD</b> Dr. K. Julia Rose Mary
<b>Checked by CDC</b> Dr.S.Jaculin Arockia Selvi	<b>Approved by</b>  Principal

**SEMESTER: I**  
**COURSE CODE: 23UMA1A11**  
**ALLIED - MATHEMATICS FOR MANAGEMENT**  
*(Employability)*  
**(For BBA)**

**COURSE OBJECTIVES:**

- To discuss the basis of all commercial arithmetic's.
- To study the measure of dispersion .
- To analyze time series and index numbers.

**COURSE OUTCOMES :**

**At the end of the course the students will be able to:**

<b>CO 1</b>	Define set and set operations and to describe fundamental ideas about matrices and their operational rules.	<b>K2</b>
<b>CO 2</b>	Explain simple interest, compound interest, annuities and sinking funds	<b>K2</b>
<b>CO 3</b>	Evaluate arithmetic mean ,median mode and to examine the measure of variation using standard, mean and quartile deviations	<b>K3</b>
<b>CO 4</b>	Draw the outline of simple correlation and distinguish between correlation and regression	<b>K3</b>
<b>CO 5</b>	Estimate time series ,relate the trend and seasonal variation and to compose index numbers, cost of living indices	<b>K3</b>

**SYLLABUS**

**Credits: 4**

**Instructional Hours: 75**

**Unit I: Sets and Matrices (K2)**

**15 Hours**

Sets and set operation: Venn diagram – Elements of coordinate system – Matrices – fundamental ideas about matrices and their operational rules – Matrix multiplication – Inversion of square matrices of not more than 3<sup>rd</sup> order

*[Self Study : Sets]*

**Unit II: Mathematics of Finance (K2)**

**15 Hours**

Mathematics of finance: Simple Interest and Compound Interest – Annuities – Sinking funds

***[Self Study : Simple Interest]***

**Unit III: Measure of central tendency (K3)**

**15 Hours**

Measure of central tendency: Arithmetic mean – Median – Mode, Geometric and Harmonic mean. Measure of variation: Standard deviation – mean deviation and quartile deviation

**Unit IV: Correlation and Regression (K3)**

**15 Hours**

Simple correlation – Scatter diagram – Karl Pearson's coefficient of correlation  
Rank correlation – Regression lines

**Unit V: Analysis of time series (K3)**

**15 Hours**

Analysis of time series: Method of measuring – Trend and seasonal variations –  
Index number – unweighted indices – consumer's prices and cost of living indices.

**TEXT BOOK:**

Navnitham.P.A., (2018), Business Mathematics and Statistics, Jai Publishers, Trichy.

Part I- Business Mathematics

Unit I: Chapter 3 (Page No: 104-146)

Chapter 4 (Page No: 147-184)

Unit II: Chapter 2 (Page No: 43-75)

Part II- Business Statistics

Unit III: Chapter 7 (Page No: 159-395)

Unit IV: Chapter 12 (Page No: 503-539)

Chapter 13 (Page No: 540-578)

Unit V: Chapter 10 (Page No: 444-471)

Chapter 14 (Page No: 579-612)

<b>Checked by CDC</b> Dr.S.Jaculin Arockia Selvi	<b>Approved by</b>  Principal

**SEMESTER I**  
**COURSE CODE: 23UMA1A19**  
**ALLIED – APPLIED STATISTICS I**  
*(Employability)*  
**(For B. Sc Data Science)**

**COURSE OBJECTIVES:**

- To learn the measures of Central tendency, Dispersion etc. and to apply them in different fields of study.
- To understand time series and Index numbers.
- To analyze Sampling techniques and use it appropriately

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO1</b>	Understand the meaning, scope of Statistics and its mode of collection and organizing.	<b>K2</b>
<b>CO2</b>	Solve problems using the measures of central tendency.	<b>K2</b>
<b>CO3</b>	Analyze Skewness, explain correlation and regression and work over it.	<b>K3</b>
<b>CO4</b>	Summarize Time Series and compute business forecasting.	<b>K3</b>
<b>CO5</b>	Investigate over Index Numbers and Interpolation methods.	<b>K3</b>

**Syllabus**

**Credits :4**

**Instructional hours:75**

**UNIT I            Introduction to Statistics(K2)**

**15 Hours**

Meaning and scope of statistics – Sources of data – Collection of data – primary and secondary – Classification and Tabulation – Presentation of data by diagrammatic and Graphic representation.

**UNIT II            Measures of Central Tendency(K2)**

**15 Hours**

Measures of central tendency – Arithmetic Mean, Median, Mode, Geometric and Harmonic mean – Measures of dispersion – range, quartile deviation, standard deviation and co-efficient of variance.

**UNIT III           Measures of Dispersion(K3)**

**15 Hours**

Skewness: Bowley's and Pearson's co-efficient of skewness – simple Correlation – Scatter diagram – Karl Pearson's coefficient of correlation – Rank correlation - Regression lines into two variables – Uses of regression.

**UNIT IV Time Series and Sampling(K3)****15 Hours**

Analysis of time series – Meaning – Components – Models – Business forecasting – Methods of measuring trend and Seasonal variations. Methods of sampling – Sampling and non-sampling errors.

**UNIT V Index Numbers and Interpolation(K3)****15 Hours**

Index number unweighted indices – consumer's prices and cost of living indices. Interpolation – Newton, Lagrange and binomial methods.

**TEXT BOOK:**

Navnitham P.A., (2016), Business Mathematics and Statistics, Jai Publishers, Trichy.

Unit 1: Chapter 1, Chapter 3, Chapter 5, Chapter 6

Unit 2: Chapter 7, Chapter 8

Unit 3: Chapter 9 (page no: 396 to 416)

Chapter 12, Chapter 13

Unit 4: Chapter 14, Chapter 4

Unit 5: Chapter 10, Chapter 15 (page no: 622 to 643)

**REFERENCE BOOKS:**

<b>Course designed by</b> Dr. G. Sindhu	<b>Verified by HOD</b> Dr. K. Julia Rose Mary
<b>Checked by CDC</b> Dr.S.Jaculin Arockia Selvi	<b>Approved by</b>  Principal

**SEMESTER: II**  
**COURSE CODE: 23UMA2A12**  
**ALLIED- OPERATIONS RESEARCH**  
**(Entrepreneurship)**

**(For B.Sc., Computer Science, B.Sc., Information Technology and BCA., BBA, B.Sc. Data Science)**

**COURSE OBJECTIVES:**

- To learn the applications of Operations Research invariably in all fields of Management and Business activities in an organization.
- To enable the students to take optimal managerial decisions pertaining to the optimistic time schedule in a real time problem.
- To evaluate the computational performance of optimization algorithms.

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO 1</b>	Identify the problem environment observation.	<b>K2</b>
<b>CO 2</b>	Solve the linear programming problems by using Big-M-method and Two phase method.	<b>K3</b>
<b>CO3</b>	Estimate the Optimum transportation schedule keeping in mind cost of transportation to be minimized.	<b>K3</b>
<b>CO4</b>	Match the various resources to the various activities on one to one basis.	<b>K3</b>
<b>CO5</b>	Find the solution to a project that involves planning, scheduling and controlling a number of interrelated activities with use of limited resources.	<b>K3</b>

**SYLLABUS**

**Credits: 4**

**Instructional Hours: 75**

**UNIT I: Introduction to Operations Research (K2) 15 Hours**

**Introduction to Operations Research:** Linear programming problem-Introduction-General LPP-Basic feasible solution-Optimum basic feasible solution- Alternate basic feasible solution- Degenerate Solution- Unbounded solution-Graphical solution method-Simplex method.

**UNIT II: Linear programming problem (K3) 15 Hours**

**Linear programming problem:** Artificial variable techniques- Big-M-method-Two phase method.

**UNIT III: Transportation Problem (K3) 15 Hours**

**Transportation Problem:** Definition-Formulation and Solution –Initial basic feasible solution- North- West Corner Rule- Matrix minima method-Vogel's approximation Method- Optimum basic feasible solution-MODI's Method.

*(Self Study- Problems in Vogel's Approximation Method)*

**UNIT IV: Assignment Problem (K3) 15 Hours**

**Assignment Problem:** Definition- Formulation and solution of Assignment problems- Hungarian method-Unbalanced Assignment problems.

*(Self Study- Problems in Unbalanced Assignment problems.)*

**UNIT V: Networks (K3) 15 Hours**

**Networks:** Introduction and basic components- Rules of network construction- Time calculations in Networks- Critical Path Method- PERT calculations.

**TEXT BOOK:**

1.Kanti Swarup,P.K.Gupta and Manmohan, (2008) Operations Research,(14th Edition) Sultan Chand & Sons Educational Publishers, New Delhi.

UNIT I Chapter 3: 3.1 - 3.5

Chapter 4: 4.1, 4.3

UNIT II Chapter 4: 4.4

UNIT III Chapter 10: 10.1, 10.2, 10.5, 10.8-10.10, 10.12, 10.13

UNIT IV Chapter 11: 11.1-11.4

UNIT V Chapter 25: 25.1-25.4, 25.6-25.8

**REFERENCE BOOKS:**

**SEMESTER: III/I**  
**COURSE CODE: 23UMC3A03 /24UMA1A23**  
**ALLIED- PROBABILITY AND STATISTICS**  
*(Employability)*

**(For B. Sc., Computer Science and B. Sc., Computer Science with Artificial Intelligence)**

**COURSE OBJECTIVES:**

- To apply Mathematical and scientific reasoning to a variety of computational problems.
- To formulate a situation as a probability model and make appropriate conclusions.
- To apply advanced algorithmic and Mathematical concepts to the design and to analyze with the help of software.

**COURSE OUTCOMES :**

**At the end of the course the students will be able to:**

<b>CO1</b>	Define and compute the various measures of central Tendency for different types of data	<b>K2</b>
<b>CO2</b>	Explain the concept of Dispersion and Compute the different measures of Dispersion	<b>K2</b>
<b>CO3</b>	Estimate the relationship between variables by using the concept of Correlation and Regression	<b>K3</b>
<b>CO4</b>	Apply the notion of Probability in decision making problems and interpret the expected values of a random variable	<b>K3</b>
<b>CO5</b>	Explain the concepts of Probability distribution and derive its characteristics	<b>K3</b>

**SYLLABUS**

**Credits : 4**

**Instructional Hours: 75**

**UNIT I Measures of Central Value (K2)**

**15 Hours**

Introduction-Average definition - Objectives-Requisites of good average-Types of averages-Arithmetic Mean, Median, Mode, Geometric Mean and Harmonic Mean-Relationship among the averages.

*(Self Study: Problems in Geometric Mean)*

**UNIT II Measures of Dispersion (K2)**

**15 Hours**

Introduction-Significance of variation-Properties -Methods of studying variation-Range, Inter Quartile range and Quartile deviation, Mean deviation, standard Deviation and The Lorenz curve-Coefficient of variation- Moments- Skewness - Kurtosis.

*(Self Study: Problems in Coefficient of variation)*

**UNIT III Correlation**

**(K3)**

**15 Hours**

Types- Methods-Scatter Diagram - Graphic method-Karl Pearson's co-efficient of correlation- Rank correlation- Concurrent deviation method- Regression Analysis- Uses- Difference between correlation and regression-Regression lines into two variables-Limitations.

**UNIT IV Probability and Expected value**

**(K3)**

**15 Hours**

Classical or a priori probability- axiomatic approach to probability-calculation of probability- Theorems of probability- conditional probability- Baye's theorem- Mathematical Expectation- Random variable and probability distribution.

**UNIT V Theoretical Distributions**

**(K3)**

**15 Hours**

Binomial, Multinomial, Negative Binomial, Poisson, Hypergeometric and Normal distributions and fitting of distributions (Simple Problems).

**TEXT BOOK:**

Gupta S.P,(2013) ,Statistical Methods, Sultan Chand & Sons, New Delhi.

UNIT I	Volume I	Chapter 7
UNIT II	Volume I	Chapter 8 and 9
UNIT III	Volume I	Chapter 10 and 11
UNIT IV	Volume II	Chapter 1
UNIT V	Volume II	Chapter 2

**SEMESTER I / III**  
**COURSE CODE 23UMA1A07 / 23UMA3A07**  
**ALLIED - MATHEMATICS PAPER I**  
**(For I B.Sc Physics & II B.Sc Chemistry students)**  
*(Entrepreneurship)*

**COURSE OBJECTIVES:**

- To introduce Binomial and Exponential Series and to provide an insight for the expansions of trigonometric functions
- To study the concept of finding the eigen values and eigen vectors
- To provide an overview of curvature and their properties.

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO1</b>	Compare the expansions of binomial series, exponential series and to apply them in appropriate places.	<b>K2</b>
<b>CO2</b>	Implement different methods in obtaining roots of any equation and analyze the category of roots.	<b>K2</b>
<b>CO3</b>	Implement the matrix method in finding the eigen values and eigen vectors. To predict the inverse of any matrix using Cayley Hamilton Theorem	<b>K2</b>
<b>CO4</b>	Apply various expansions of trigonometric functions in obtaining the power series	<b>K3</b>
<b>CO5</b>	Define the radius of curvature for different curves and describe the evolutes and involutes of all the curvatures	<b>K3</b>

**SYLLABUS**

**Credits: 5**

**Instructional Hours: 90**

**UNIT I: Algebra (K2)**

**18 hours**

Binomial Theorem – The greatest coefficient in the expansion of  $(1+x)^n$  and Application of Binomial Theorem to Summation of series. Exponential Series, Exponential theorem and Application of Exponential Theorem to Summation of series.-Approximations and limits.

***(Self Study: Problems in obtaining higher powers of numbers using Binomial Theorem)***

**UNIT II: Theory of Equations (K2)**

**18 hours**

Theory of equations: Roots of an equation-nature of roots-relation between roots and coefficients of an algebraic equation - Transformations of equations – roots with sign changed, roots multiplied by a given number. Increasing and decreasing the roots of an equation – Standard form of reciprocal equation.

**UNIT III: Matrices**

**(K2)**

**18 hours**

Matrices: Eigen values and Eigen vectors – Eigen values for symmetric matrices - Cayley Hamilton theorem (without proof) – verification of Cayley Hamilton theorem for the problems-Finding the inverse of matrix using the application of Cayley Hamilton theorem.

**(Self Study: Problems in obtaining higher powers of matrices using Cayley Hamilton Theorem)**

#### UNIT IV: Trigonometry

(K3)

18 hours

Trigonometry: Applications of De-Moivre's theorem- $\cos n\theta, \sin \theta, \tan \theta$  Powers of sines and cosines of  $\theta$  in terms of functions of multiples of  $\theta$  - expansions of  $\cos^n \theta, \sin^n \theta$  in a series of

ascending powers of  $\theta$  - simple limit problems like  $\theta \rightarrow 0$  and  $\theta \rightarrow \frac{\pi}{2}$ .

#### UNIT V: Curvature

(K3)

18 hours

Curvature – Center, radius and circle of curvature in Cartesian form - Center, radius and circle of curvature in polar form – Finding the co-ordinates of the center of the curvature in Cartesian and polar forms –Evolutes, involutes and envelopes of the curves – Pedal equations for different curves.

**SEMESTER: II / IV**  
**ALLIED - MATHEMATICS PAPER II**  
**COURSE CODE: 23UMA2A10/23UMA4A08**  
**(For I B.Sc Physics & II B.Sc Chemistry students)**  
*(Entrepreneurship)*

**COURSE OBJECTIVES:**

- To introduce the concept of Integration and Differential equations and to solve Partial Differential equations.
- To study the method of solving the integration by reduction formulas.
- To provide an exposure on Fourier series.

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO1</b>	Describe the different types of integration and solve them	<b>K2</b>
<b>CO2</b>	Integrate different forms of trigonometric functions by reduction formula and integration by parts	<b>K2</b>
<b>CO3</b>	Acquire the knowledge of linear differential equations with constant coefficients	<b>K2</b>
<b>CO4</b>	Classify different forms of functions and forming the partial differential equations	<b>K3</b>
<b>CO5</b>	Investigate the properties of full range and half range fourier series	<b>K3</b>

**SYLLABUS**

**Credits : 5**

**Instructional Hours: 90**

**UNIT I: Types of Integration (K2)**

**18 hours**

Integration - Definite integral-Methods of Integration - Integrals of functions containing linear

functions of x- Integrals of the form  $f(ax+b)$ ,  $a^2 \pm x^2$ ,  $f(x^n)$ ,  $(f(x))^n$ ,  $F(f(x))$

*[Self Study : Basics of Integration]*

**UNIT II: Reduction Formula (K2)**

**18 hours**

Integration by parts - Reduction formula for  $\int x^n e^{ax} dx$ ,  $\int x^n \cos ax dx$ ,  $\int \sin^n x dx$ ,  $\int \cos^n x dx$ ,  
 $\int \sin^m x \cos^n x dx$ ,  $\int \tan^n x dx$ ,  $\int \cot^n x dx$ ,  $\int \sec^n x dx$ ,  $\int \operatorname{cosec}^n x dx$  and  $\int x^m (\log x)^n dx$

### **UNIT III: Linear Differential Equations (K2) 18 hours**

Linear Differential equations with constant coefficients of the form  $(aD^2 + bD + c)y = e^{ax}\varphi(x)$  where a, b, c are constants,  $\varphi(x) = \sin mx$  or  $\cos mx$  or  $x^m$ .

**[Self Study : Linear Differential Equations  $(aD^2 + bD + c)y = e^{ax}\varphi(x)$  with constant coefficients where  $\varphi(x)$  is of the form  $x^m$ ]**

### **UNIT IV: Partial Differential Equations (K3) 18 hours**

Formation of Partial Differential equations by eliminating arbitrary constants and arbitrary functions solutions of standard types of first order equations

$$f(p, q)=0, f(x, p, q)=0, f(y, p, q)=0, f(z, p, q)=0, f_1(x, p) = f_2(y, q).$$

### **UNIT V: Fourier Series (K3) 18 hours**

Fourier series: Definition – finding Fourier coefficients for given periodic functions with period  $2\pi$ , odd and even functions- Half range Fourier series

#### **TEXT BOOKS:**

1. Narayanan S., Hanumantha Rao R and Manicavachagom Pillay T.K. (2007), Ancillary Mathematics Volume II by SV Publications, [UNIT I, II, IV, V].
2. Narayanan S and. Pillai. T. K. M, (1996) Differential Equation and its applications, S.Viswanathan Printers and Publishers, .[UNIT-III]

UNIT I	Chapter 1	Section 1.1 to 6.5
UNIT II	Chapter 1	Section 12,13.1-13.10
UNIT III	Chapter 5	Section 1- 4.2
UNIT IV	Chapter 6	Section 01 - 5.3
UNIT V	Chapter 2	Section 1 - 5.2

**SEMESTER: III**  
**COURSE CODE: 24UMA3A20**

**TITLE OF THE COURSE: ALLIED: APPLIED STATISTICS II**  
**(Employability)**

**(For B. Sc Data Science)**

**COURSE OBJECTIVES:**

- To know the random variables and their different distributions.
- To estimate the population parameters using sample statistics.
- To test the hypothesis in order to extend the sample inference to the Population

**COURSE OUTCOMES:**

**At the end of the course the students will be able to:**

<b>CO1</b>	Understand the concept of Random Variable and its Distributions with its Characteristics.	<b>K2</b>
<b>CO2</b>	Understand the concept of Theoretical Distributions and its Characteristics	<b>K2</b>
<b>CO3</b>	Apply the sampling methods and its type for Large Sample Test.	<b>K3</b>
<b>CO4</b>	Apply Normal, t, F, Chi-Square Tests based on Small Sample Test.	<b>K3</b>
<b>CO5</b>	Apply analysis of variance, analysis of CR, RD and Latin square design for the practical problems	<b>K3</b>

**SYLLABUS**

**Total Credits: 4**

**Instructional Hours:75**

**Unit I: RANDOM VARIABLES (K2)**

**15 Hours**

Random Variable – Distribution Function - Discrete and Continuous Random Variable – Continuous Distribution Function - Mathematical Expectation – Expected Value of Function of a Random Variable- Properties of Expectation and Variance- Covariance. **(Problems Only)**

***(Self Study: Properties of Expectation)***

**Unit II : THEORETICAL DISTRIBUTIONS (K2)****15 Hours**

Theoretical Distributions – Binomial, Poisson and Normal - Moments, Mean, Standard Deviation, MGF and Fitting of Distribution. **(Problems Only)**

**Unit III : SAMPLING METHODS (K3)****15 Hours**

Types of Sampling- Parameter and Statistic- Tests of Significant- Procedure for testing of Hypothesis -Tests of Significant for Large Samples- Sampling of Attributes- Sampling of Variables.

*(Self study: Sampling methods)*

**Unit IV : TESTING THE HYPOTHESIS (K3)****15 Hours**

Tests of Significance of Small Sample Tests based on Normal t, F and Chi-square tests, Goodness of Fit. **(Problems only)**

**Unit V : ANALYSIS OF VARIANCE (K3)****15 Hours**

Analysis of Variance – One way and Two way classifications – Experimental Designs –Randomized Block Designs- Latin Squares.

**TEXT BOOKS:**

## SEMESTER II

COURSE CODE: 24UMA2A24

TITLE OF THE COURSE: ALLIED - DISCRETE MATHEMATICAL STRUCTURES

*[Employability]*

(For B. Sc., Computer Science with Artificial Intelligence)

### COURSE OBJECTIVES

- To understand the concepts of Set Theory.
- To understand the Mathematical Logics and Theory of Inference.
- To recall Relations and Functions
- To inculcate the knowledge to design the Finite State Automata
- To extend the idea of Graphs and Trees.

### COURSE OUTCOMES:

- At the end of the course the students will be able to

CO 1	Understand the Theory of Inference for the Statement Calculus and Predicate Calculus	K2
CO 2	Understand the concepts of Relations and Functions in Computer Science	K2
CO 3	Understand the different types of Grammars in Deterministic and Non-Deterministic Finite State Automata.	K2
CO 4	Apply Boolean Algebra and simplify Boolean Expressions using Karnaugh Maps	K3
CO 5	Demonstrate structural designs using various patterns of Graphs and applying algorithms to understand the concepts of Trees in real life.	K3

## SYLLABUS

Credits: 4

Instructional Hours: 75

### Unit I: Mathematical Logic (K2)

15 Hours

Mathematical Logic - Introduction-Propositional Calculus - Basic Logic Operations – Tautologies -Contradiction – Argument - Methods of Proof - Predicate Calculus.

### Unit II: Relations and Functions (K2)

15 Hours

Relations - Binary Relations - Set Operation in Relations - Types of Relations-Partial Order Relations - Equivalence Relation - Composition of Relations - Functions - Types of Functions - Invertible Functions - Composition of Functions.

*(Self Study: Composition of Functions)*

**Unit III: Languages, Grammar and Automata (K2)**

**15 Hours**

Languages - Operation on Languages - Regular Expressions and Regular Languages - Grammar and Types of Grammars - Finite State Machine - Finite State Automata.

**Unit IV: Boolean Algebra (K3)**

**15 Hours**

Boolean Algebra- Basic theorems in Boolean Algebra-Boolean Functions-Logic Gates and Circuits-Boolean Expression- Minterm and Maxterm- Karnaugh map.

**Unit V: Graph Theory and Trees (K3)**

**15 Hours**

Graph theory - Basic Terminology – Paths - Cycle & Connectivity – Subgraphs - Types of Graphs - Representation of Graphs in Computer Memory – Trees - Properties of Trees - Binary Trees - Traversing Binary Trees - Computer Representation of General Trees.

*(Self Study: Subgraphs , Properties of Trees )*

**Text Book:**

1. Discrete Mathematics- J.K. Sharma Second Edition -2005, Macmillan India Ltd.

(Unit I to Unit V)

**Unit I** : Chapter 12: Section: 12.1-12.3, 12.8-12.9, 12. 11-12.12, 12.14

**Unit II:** Chapter 3: 3.3- 3.7, 3.11

Chapter 4: 4.3-4.5

**Unit III** : Chapter 15: 15.3-15.7

**Unit IV** : Chapter 13: 13.1-13.3, 13.5, 13.7, 13.9-13.11

**Unit V** : Chapter 9: 9.1-9.5, 9.8

Chapter 10: 10.1-10.3, 10.6, 10.8

**Reference Books:**

1. Discrete Mathematics Structures with Application to Computer Science-J. P.Tremblay R Manhar-Mc Graw Hill International Edition.
